

Experience

Techlore - Web Developer March 2018, October 2018

Created and designed website for Techlore YouTube channel, then redesigned and updated it several months later. Statically hosted site, used Jekyll as a templating engine. This improved my ability to go from mockup to CSS quickly, and working remotely with the channel owner and communication over FaceTime and messages improved my communication skills.

The Colour Bar - Web Developer Spring - Summer 2018

Worked on internal inventory management system for The Colour Bar, a Sacramento hair salon. Worked remotely, and used Vue.js for frontend and Node for backend. Had a lot of creative freedom on this project, and consequently a lot of freedom with hitting deadlines. I learned a great deal about my limitations as a developer, and overcame some of those limitations; I also learned the value of steady, continuous, daily work on a project as opposed to short sprints.

First Choice Tutoring - Web Developer Spring 2017

Created static frontend site for a local tutoring company. Was my first commissioned software development product, and as such I learned a lot about meeting deadlines, taking customer feedback and implementing it, and creating an end result that meets the expectations of the customer.
